

SIRE AND DAM SUMMARY

WAGYU BREEDING GUIDE **JULY 2022**

This Guide enables
you to apply your own
priorities and select
appropriate sire and dam
breeding for your herd.

Suite 6, 146 Marsh Street,
Armidale NSW AUSTRALIA 2350

email office@wagyu.org.au

VERSION : 072022-SC11493

Introduction

Sire and dam selection is a complex decision for all Wagyu breeders.

This Breeding Guide will help simplify the selection process for you. It provides a listing of bulls and females in the Australian Wagyu Association's (AWA) database with substantial performance and carcass data recorded.

The following requirements apply for an animal to qualify to be listed in this publication:

SIRES

- More than 10 progeny registered
- Registered progeny born in the last three years
- Minimum accuracy of 80% for 200-Day, 400-Day or 600-Day weight

DAMS

- More than three progeny registered
- Registered progeny born in the last three years
- Minimum accuracy of 80% for 200-Day, 400-Day or 600-Day Weight

YOUNG BULLS

- Be less than five years old
- All EBVs better than breed average
- Minimum accuracy of 50% for 200-Day, 400-Day or 600-Day weight or Genomic SNP results

In addition to their EBVs, the Sire, Dam and Young Bulls Lists also includes each animal's four BreedObject Indexes, developed specifically for Wagyu to enable selection for profitability in Wagyu. The four profitability \$Indexes are designed to optimise profit outcomes from commercial Self-replacing, Fullblood terminal and F1 terminal production systems. The four Indexes are:

- Self-replacing \$Index (SRI)**
- Wagyu Breeder \$Index (WBI)**
- Wagyu Fullblood Terminal \$Index (FTI)**
- Wagyu F1 Terminal \$Index (F1I)**

These new \$Indexes are targeted specifically to a defined production and market scenario and members should identify and use the Index which best suits their purpose. It is not appropriate to compare index values of between \$Indexes as they are based on different production model assumptions.

This Guide enables you to apply your own priorities and select appropriate sire and dam breeding for your herd. Where your selection of seedstock genetics is unavailable for purchase, a review of pedigrees will provide a direction for alternative selections.

WHAT'S MOST IMPORTANT TO YOU?

Using this Guide is simple. First, identify your highest breeding priority, such as:

- » Improve growth and maintain marbling
- » Improve marbling and maintain growth
- » Improve carcass weight
- » Selecting the most reliable proven bulls
- » Maximising slaughter progeny returns.

Use the EBV or Index List that meets your highest priority breeding objective and select with confidence.

For full access to the most up-to-date Wagyu EBVs and BreedObject \$Indexes covering the entire Australian Wagyu Association recorded animal population, go to: [website](#)  [> Animal Search](#) [> EBV Enquiry](#)

MONITORING YOUR HERD'S GENETIC PROGRESS

Herd Reports are generated after every Wagyu BREEDPLAN analysis and these are available from the AWA member login area.

The Wagyu BREEDPLAN Completeness of Recording Report is generated for all herds that have submitted post-birth performance data to BREEDPLAN since the previous analysis. This report uses EBVs and Indexes produced from data collected through your herd recording to let you track the genetic progress of your herd on key traits. With the Completeness of Recording Report, you can monitor the success of your breeding choices and benchmark your herd within the Wagyu breed.

This Report is available to all Wagyu BREEDPLAN enrolled members. To get a report for your herd, contact our Technical Services Manager:

Carel Teseling

Important notice

DISCLAIMER

It is very important that you appreciate when viewing the AWA database that the information contained on the AWA database, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, is based on data supplied by members and/or third parties.

Whilst every effort is made to ensure the accuracy of the information reported through AWA, AWA officers and employees assume no responsibility for its content, use or interpretation. AWA disclaims all liability (including without limitation, liability in negligence) for all expenses, losses, damages and costs you may incur as a result of the use by you of the data on this AWA database and the information supplied by ABRI and AGBU being inaccurate or incomplete in any way for any reason.

Regarding EBVs and Index values, it is very important to appreciate, and you need to be aware that:

EBVs are derived using Wagyu Single Step BREEDPLAN technology developed independently by the Animal Genetics and Breeding Unit (AGBU), using the information contained within the AWA database.

AGBU is a joint venture of NSW Department of Primary Industries and the University of New England, which receives funding for this purpose from Meat and Livestock Australia Limited.

AWA relies solely on advice provided by AGBU and ABRI in accepting Wagyu Single Step BREEDPLAN software.

EBVs published in Wagyu Single Step BREEDPLAN are estimates of genetic potential of individual animals and may not reflect the raw animal phenotype.

EBVs can only be directly compared to other EBVs calculated in the same monthly Wagyu Group BREEDPLAN analysis.

Regarding pedigree and DNA testing results submitted to the AWA, it is very important to appreciate, and you need to be aware that:

Pedigree and DNA data submitted and supplied to AWA may have errors in it which cannot be detected without further DNA testing.

Technology may have advanced since a particular test was undertaken so that previous inaccuracies which were not detectable are now able to be detected by current testing technology.

AWA estimates that less than 1% of the pedigree entries, ownership or breeding details in the AWA Herdbook may have errors or which may be misleading. For this reason, users ought to consider if they need to obtain independent testing of the relevant animal (if possible) to ensure that the data is accurate.

Regarding prefectural content, it is very important to appreciate, and you need to be aware that:

Prefectural content is based on the estimation of prefectural origin from Japanese breeding records of 201 foundation sires and 168 foundation dams. As genotype-based parent verification is not used in Japan, and full Japanese registration certificates are not available for all foundation animals, exact prefectural composition for these sires and dams cannot be validated.

The calculation of prefectural content for Australian Herdbook animals relies on the accuracy of pedigree records and DNA samples provided by AWA members.

The reporting of prefectural content for animals within the AWA Herdbook relies on the calculation provided by ABRI.

If you consider that you do not understand or appreciate the nature and extent of the data provided on this website or the EBVs of a particular animal, then AWA strongly recommends that you seek independent expert advice.

Wagyu BREEDPLAN EBV percentile bands for animals born in 2020*

Use this table as a guide to compare individual animals with the current genetic level of the Wagyu breed

	—Calving—		— Growth & Maternal —					— Carcase —							— Indexes —
