**2021 SALE
CATALOGUE**

SALE COMMENCES 28 APRIL at 4pm (AEST)

45 LOTS ON OFFER

—
FEMALES

—
BULLS

—
FLUSH LOTS

—
EMBRYO LOTS

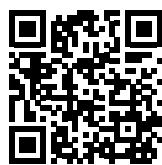

—
SEMEN LOTS

While care has been taken to ensure that information contained in the AWA Elite Wagyu Sale – April 2021 catalogue is true and correct at the time of publication, changes in circumstances after the time of publication may impact on the accuracy of this information.

Buyers of animals are encouraged to undertake their own due diligence with respect to the animals, including, where the buyer thinks necessary, making enquiries of the owners or requesting particular tests be undertaken prior to purchase, provided that such tests will be at the owner's discretion. Any warranties or representations in this document in respect of animals are given by the respective owners of the animals and not by the AWA.

Hover your phone camera over the code, to discover the latest progeny and EBVs for each lot in this sale.

President's note

WELCOME TO THE AWA'S INAUGURAL ELITE WAGYU SALE - APRIL 2021

The 2021 AWA Elite Wagyu Sale is the first to be focused solely on animals representing the top 5% of Wagyu EBVs in each trait category (carcase, growth and maternal), and a Breed \$Index in the top 1% of Wagyu BREEDPLAN as registered with the Australian Wagyu Association. The catalogue includes 45 impressive lots, each supported by detailed and verified pedigree, EBV and health data.

The Elite Wagyu Sale will be held live and broadcast online on 28 April, 2021, enabling bidders around the world to share this unique opportunity to secure the finest Wagyu genetics available outside Japan.

Our listing includes elite seedstock bulls and breeders, semen and embryos, rare genetics and entries from important emerging segments such as polled. We can report that competition for entry was vigorous, demonstrating the continued confidence in the global Wagyu industry. We thank all members involved for their continuing support.

The Sale is conducted by GDL in association with Elite Livestock Auctions under the ALPA Livestock Auction Terms and Conditions of Sale and promotional support from the AWA. Although many of the genetics on offer may be exported, buyers planning to purchase for export are reminded to apply rigorous due diligence in their pre-sale lot scrutiny, to ensure that all protocols applicable to their destination market have been observed.

We wish all buyers well in embracing this exciting opportunity to purchase some of the world's best Wagyu genetics.

A handwritten signature in black ink, which appears to read 'Charles Perry'.

Charles Perry

President

Australian Wagyu Association

WAGYU IN AUSTRALIA

The Australian Wagyu sector has established itself as the pinnacle of Australian beef production. A unique feature of the Australian Wagyu sector is the prominence of mature Wagyu brands into export markets and vertical integration.

Approximately 90% of Australian Wagyu production is exported to high-value markets. High marbling has clearly differentiated Wagyu as a unique product compared to other beef delivering an eating experience that is unrivaled. The average of Australian Fullblood Wagyu achieves a marble score greater than 7.5, more than three-fold the average of any other breed.

High value markets in Asia, Middle East, Europe and America recognise Wagyu as their haute cuisine, where only the finest products feature on their menus. Australian Wagyu Fullblood and Crossbred Wagyu boxed beef has demonstrated continued demand in these markets.

Wagyu are extremely tough cattle, operating successfully from the hot, tropical northern environments through to cooler, temperate southern climates. Wagyu cows display exceptional fertility and maternal instincts. Offspring growth is solid and longer maturing in order to lay down the rich marbling for which the breed is renowned.

Many producers have capitalised on the remarkable opportunities with Wagyu, with growth in production of 20% per annum for the past five years. As a result, Wagyu production levels in Australia have reached significant volumes, where a focus on rapid improvement in quality through genetic progress has been possible to support market premiums.

Wagyu origins

TRADITIONAL JAPANESE ORIGINS

In Japan there are four significant breeds described as 'Wagyu'. The largest is the Japanese Black, comprising about 95% of the Japanese national Wagyu herd, and the predominant breed exported to the USA and onward to Australia.

The Japanese Brown comprises about 4% of the Japanese herd, comprises two strains, substantially influenced by Simmental and Korean genetics, and is referred to as Red Wagyu in Australia. The Japanese Polled and Japanese Shorthorn are niche breeds that are not present outside Japan.

The Australian Wagyu Sector has grown from a limited sample of genetics selected from the larger Japanese Black populations, with a marked emphasis on genetics from the Hyogo Prefecture. AWA continues to monitor inbreeding within its herdbook. It is important that breeders understand and manage inbreeding within their herds. Breeders are encouraged to use the AWA Wagyu Mating Predictor tool and the more advanced MateSel program to manage inbreeding within their herds.

Major bloodlines

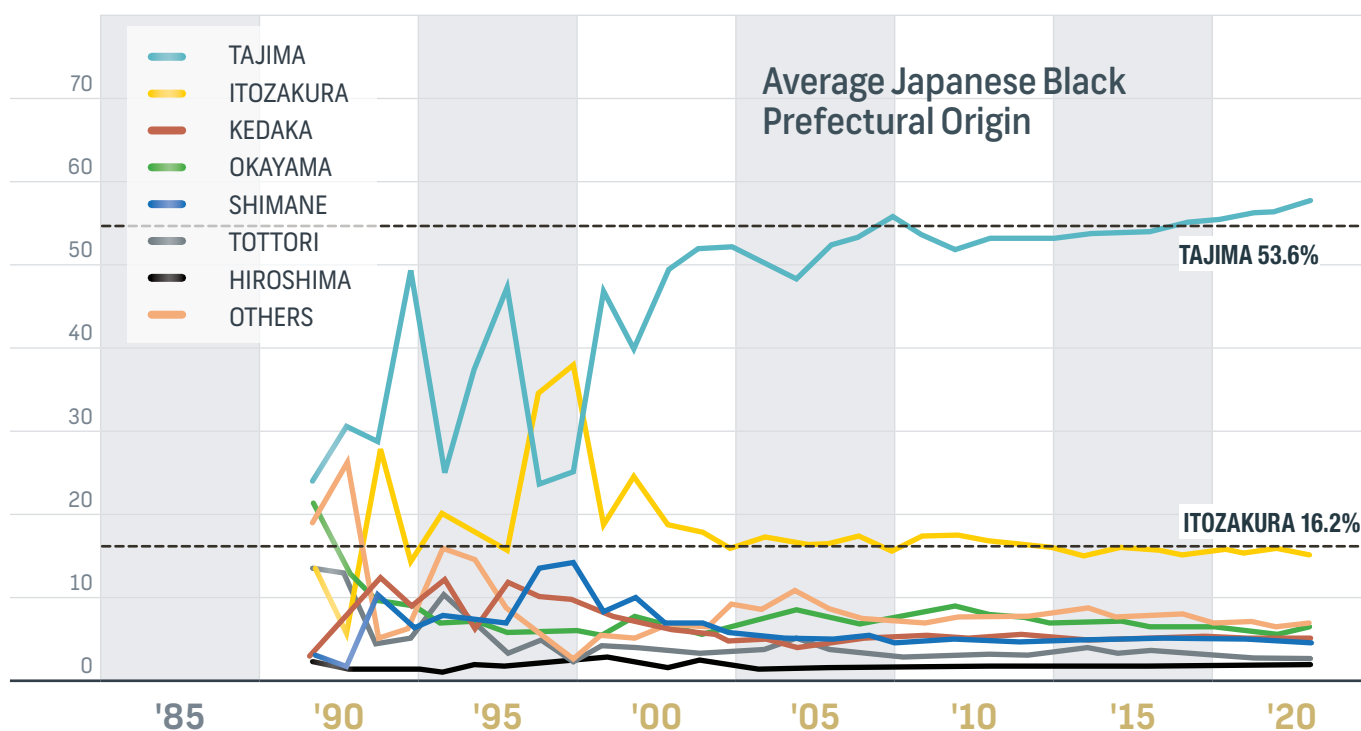

MAJOR WAGYU PREFECTURAL BLOODLINES

What is now called the Black Wagyu breed within Australia is a combination of the unique Japanese Black strains of the different prefectural herds of Japan, which has significant outcomes in noticeable variability of conformation.

The AWA's prefectural origin analysis enables a stronger understanding of the linkage of international herds to the ancestral breeding regions of Japan. Understanding prefectural structure within the registered population enables alignment of local work with the established international analysis of the breed, to give a consistent 'single narrative' and understanding. Significant prefectural diversity remains, allowing for breeding and genetic conservation. For most Australian production purposes, there are three traditional Japanese Black prefectural bloodlines, and one modern strain. All lines are used for Fullblood meat production.

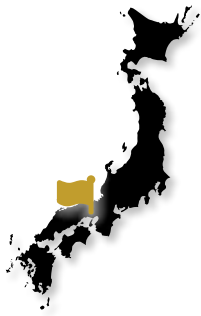

Prefectural composition (%)

Average Japanese Black Prefectural Origin

Traditional prefectural origin composition of the Australian Wagyu Association registered herd, showing changes in composition reflecting breeding trends over time.

Major bloodlines

HYOGO PREFECTURE

Descendants of **Hyogo** breeding form the largest segment of the Australian Fullblood herd. Hyogo is the home of Kobe Beef and the sole remaining segregated prefectural herd in Japan. Hyogo cattle are known for superior meat quality but relatively small stature. Carcase weights are significantly lower than the Japanese national average, and average carcase BMS (Japanese Meat Grading Association (JMGA) marble score) is not significantly higher. The most common and well-known Hyogo sire bloodline in Australia is Tajima, but the Kumanami strain is represented in the sire Itoshigenami, also frequently described as Tajima outside Japan.

Hyogo cattle are considered ideal outcross sires in the production of Crossbred Wagyu F1 50% feeder cattle, which explains the numerical dominance of high Hyogo content animals in the Australian herd, a result of original import demand for F1 production sires. This is the most commoditised strain of Black Wagyu both in Australia and Japan. Some infusion of Hyogo genetics is generally regarded as essential in the efficient production of the best quality Wagyu beef. Due to high levels of inbreeding in the Hyogo sub-population, care is needed in joining strategies.

ITOZAKURA LINE

The second most common grouping in Australia, this is a modern bloodline founded on the famous sire Dai 7 Itozakura, combining **Hyogo** and **Okayama** prefectural genetics (in Shimane Prefecture). Many seedstock of Takeda Farm breeding fall within this grouping and the founding sire is prominent in many Australian pedigrees. The line is sometimes mis-described as Fujiyoshi. The founding sire of the line was the premier Japanese Black sire for superior beef production in Japan over a lengthy period, combining consistent high marbling with strong growth.

SHIMANE PREFECTURE

This lightly represented group represents the third highest proportion of the local population and often described as **Fujiyoshi**. The group consists of medium framed cattle with good maternal qualities, growth rates and meat quality.

TOTTORI PREFECTURE

In terms of national calf registrations, **Tottori** prefecture genetics have dominated Japanese Wagyu beef production since the 1960s, but the prefecture is only lightly represented in Australia through the Westholme Fullblood herd. The two main sub-strains are Kedaka and Eikou. Tottori produces larger animals featuring straight, strong back lines, good growth rates, superior maternal ability and high yielding, high quality carcasses. In terms of percentage infusion in national sire production tables Tottori remains the most influential strain in Japanese breeding.

JAPANESE BROWN

Known as 'red' lines (Akaushi), the Kochi and Kumamoto strains present in Australia have been strongly influenced by Korean and European breeds, particularly Simmental.

Breeding technology

ADVANCES IN WAGYU BREEDING TECHNOLOGY – SINGLE-STEP WAGYU BREEDPLAN

With the growth in demand for Wagyu beef in Australia and globally, production throughout the value chain is expanding. Well described, high performing Wagyu genetics are called for in both the Fullblood and Crossbred Wagyu supply chains. In response, in the past few years, Wagyu seedstock registrations have increased by about 20% each year – all are DNA parent verified to ensure accurate pedigree.

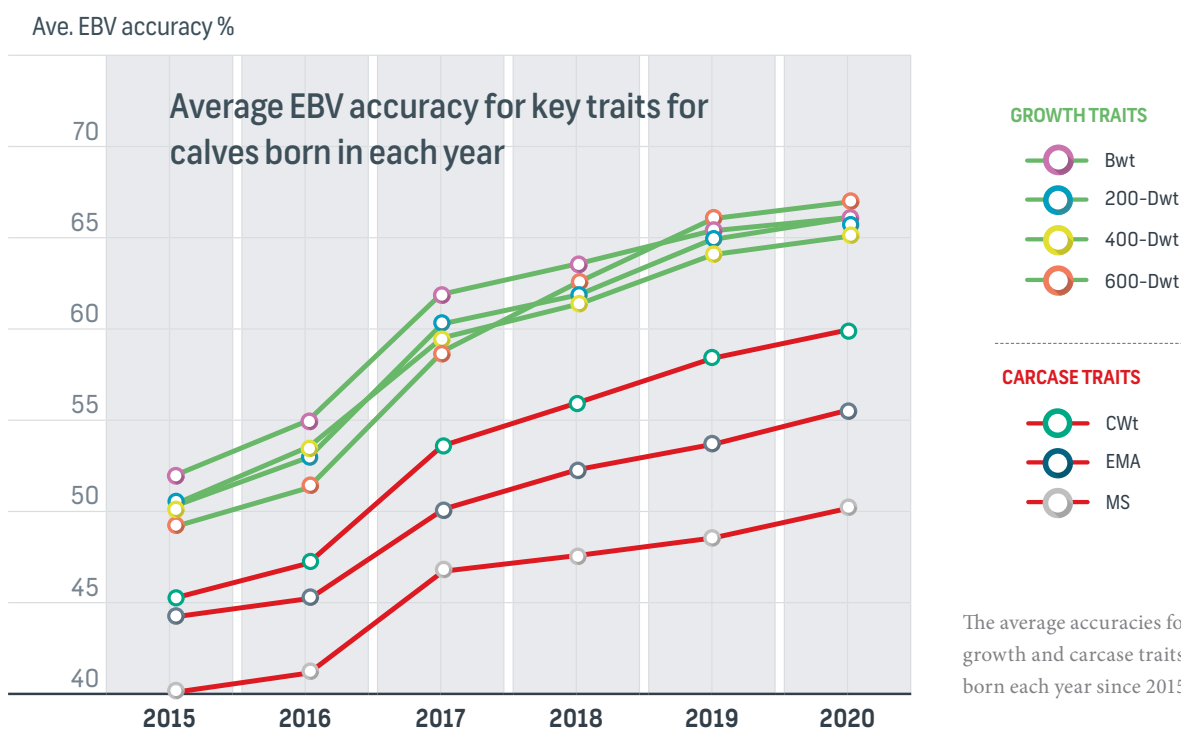

The Wagyu genetic analysis is based on three components, a pedigree recording platform (the AWA Herdbook described above), phenotypic records (animal performance data for traits supplied by members) and genotype records (genomic data supplied by members). Using these sources of information, Wagyu BREEDPLAN uses statistical analysis to calculate the genetic merit of individuals using all available data.

The Wagyu BREEDPLAN analysis provides EBVs for all dams,

sires and calves registered with the AWA, including those from members in more than 20 countries. The analysis uses approximately 70,000 genomic records and an increasing volume of performance records including carcase data from more than 12,000 Fullblood Wagyu carcasses.

The largest impact of genomic and performance data is on 'current' or newly registered animals. Shown in the Figure below are the average accuracies for the core growth and carcase traits for the calves born in each year since 2015.

The overall trend for EBV accuracy for newly registered calves has been a substantial increase from an average of 47.5% for calves registered in 2015, to 61.5% for calves registered in 2020. This is an increase in EBV accuracy of 14% during the five-year period to 2020. The average accuracy of growth traits EBVs is now greater than 65% for 2020 born calves, with accuracy for carcase traits ranging from 50% (EMA) to 60% (CWT).

Wagyu BREEDPLAN EBVs

WAGYU BREEDPLAN EBVS

AUSTRALIAN WAGYU GENETIC ANALYSIS

Wagyu BREEDPLAN is the genetic evaluation program implemented by the Australian Wagyu Association which uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of performance and pedigree recorded cattle for a range of economically important production traits (e.g. weight, carcass, fertility). More than 600 scientific publications have been produced describing BREEDPLAN and its implementation for driving genetic progress across cattle breeds.

Wagyu BREEDPLAN includes pedigree, performance and genomic information from the Australian Wagyu Association's database, which is on the largest globally available Japanese Black database, to evaluate the genetic merit of animals.

The Wagyu BREEDPLAN analysis provides the most thorough and accurate assessment of Fullblood Wagyu genetics available outside Japan. The analysis includes 115,000 dams and 13,500 sires. In addition, there are 32,500 animals with birth weights, 35,500 with weaning (200-Day) weights and 30,000 with 400-Day weights. Fullblood carcass data includes 12,500 carcass weights, 6,000 carcass EMAs and a total of 12,000 carcass Aus-Meat marble scores, camera marbling percent and camera fineness index measures.

ESTIMATED BREEDING VALUES (EBVs)

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, it is possible to make good estimates based on the performance of the animal and its progeny. These are called Estimated Breeding Values (EBVs) and are therefore the best estimate of an animal's genetic merit. EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the Wagyu BREEDPLAN genetic evaluation and are reported in the units in which the measurements are taken.

Estimated Breeding Values for an animal may change as additional performance data or genotype information is provided for that animal or animals within that animal's pedigree. It is not unusual for EBVs to change, particularly where the EBVs are low accuracy (<50%). For hard to measure, or traits that can only be measured late in life, such as carcass and meat quality traits, EBVs provide the best estimate of an individual's genetic merit early in life to help inform management decisions.

Submission of performance data can have a large bearing on the estimate of an animal's genetic merit over its life and this will impact the genetic merit of the animal's progeny. As the accuracy of an EBV improves over time (along with more data and genotype information), EBV values will be more constant. Please refer to the section on Accuracy within this guide for additional information.

USING EBVS TO COMPARE ANIMALS

Wagyu BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals. The expected difference equals half the difference in the EBVs of the animals, assuming they are used in the same way (i.e. they are joined to the same animal/s). For example, a bull with a 200 Day Growth EBV of +20 would be expected to produce progeny that are, on average, 5 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +10 kg (i.e. 10 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

BENCHMARKING AN ANIMAL WITHIN THE BREED

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Wagyu animals. To benchmark an animal's genetics relative to other Wagyu animals, the EBV can be compared to the breed average EBV for the trait or the percentile table.

The current breed average EBV is listed in the Wagyu Breeding Guide while the current percentile table is can be found on page 16.

Wagyu BREEDPLAN EBVs

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

ACCURACY RANGE INTERPRETATION

Less than 50% = Low accuracy and should be considered a preliminary estimate. The EBV could change substantially as more performance information becomes available, however the EBV is still the best guide for genetic merit of the animal at that point.

50 - 74% = Medium accuracy, usually based on the animal's own performance records, genomics and pedigree.

75 - 90% = Medium-high accuracy and also includes some progeny information. Becoming a more reliable indicator of the animal's true value as a parent.

90% and above = High accuracy associated with a large amount of performance and progeny information.

FERTILITY AND BIRTH EBVs

Scrotal Size EBV (SS) (cm) is an indicator of male fertility in regard to semen quality and quantity in Western breeds of cattle. Higher (positive) EBVs indicate higher fertility. There is also a small negative correlation (desirable) with the age of puberty and fertility in female progeny. The relationship between scrotal size and fertility in Wagyu is assumed, but not proven.

Gestation Length EBV (GL) (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to lighter birth weights and easier calving.

Birth Weight EBV (BW) (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

GROWTH EBVs

200-Day Milk EBV (MILK) (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200-Day Growth EBV (200) (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (400) (kg) is calculated from the weight of animals taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (600) (kg) is calculated from the weight of animals taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (MCW) (kg) is based on the weight of the cow when the calf is weighed for weaning, adjusted to five years of age. This EBV is an estimate of the genetic difference in cow weight at five years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Breeders of steers wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

CARCASE EBVs

Carcase Weight EBV (CWT) (kg) is based on abattoir carcase records and live weight measurements (particularly 600 Day weight) and is an indicator of the genetic differences in carcase weight at the industry average slaughter age of 990 days. Larger positive values are more favourable.

Eye Muscle Area EBV (EMA) (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 420kg dressed carcase. A higher positive EBV indicates larger eye muscle area and therefore higher retail beef yields. Ultrasound, Aus-Meat and Japanese Digital Image Camera measured Eye Muscle Areas from slaughter animals contribute to this EBV.

Rump Fat EBV (RUMP) (mm) estimates the genetic differences in fat depth at the P8 site of a 420kg dressed carcase. A higher positive EBV indicates more subcutaneous fat and earlier maturity.

Retail Beef Yield Percent EBV (RBY) (%) estimates the genetic differences in total (boned out) meat yield as a percentage of a 420kg dressed carcase. A higher positive EBV indicates higher percentage yield for the 420kg carcase weight.

Marble Score EBV (MS) (Aus-Meat Marble Score) is an estimate of the genetic difference in the Aus-Meat Marble Score in a 420kg carcase. Marble Score EBV utilises Aus-Meat Marble score on a scale of 1 to 10 where 10 is equivalent to an Aus-Meat Marble Score grading of 9+. Where results from the Meat Image Japan digital carcase camera are available, Camera Marbling Percentage and Marble Fineness are also used to calculate Marble Score EBV as the genetic correlations between these measures and Aus-Meat Marble Score are very high. Larger positive values are more favourable.

Marble Fineness EBV (MF) (Marbling Fineness Index) estimates the genetic differences in the Marbling Fineness Index (degree of fineness of marbling fat) as measured by the Japanese Digital Image Camera. A higher more positive EBV indicates higher levels of marbling fineness.

Wagyu BREEDPLAN EBVs

WAGYU BreedObject \$INDEXES

BreedObject \$Indexes, which utilise Wagyu BREEDPLAN EBVs, are now available and allows selection of Wagyu seedstock based on profitability for different commercial production systems. Four Wagyu BreedObject \$Indexes have been developed to date:

Self-replacing Breeding \$Index (SRI)

Wagyu Breeder \$Index (WBI)

Wagyu Fullblood Terminal \$Index (FTI)

Wagyu F1 Terminal \$Index (F1I)

Each of the \$Indexes are targeted specifically to a defined Wagyu production and market scenario and producers should identify and use the index that best suits their purpose. It is not appropriate to compare index values of different \$Indexes as they are based on different production model assumptions. It is not the index with the highest \$ value that you should use, it is the index that best reflects your production system.

BreedObject \$Indexes target economic breeding objectives based on average herd and market conditions and have generally targeted the main markets within the main production systems, combining genetic information within BREEDPLAN into one EBV for each \$Index that considers production costs and realised value.

Self-replacing Breeding Index (SRI)

The Self-replacing Index can be used to select Fullblood bulls that will produce more profitable females when these are retained in Fullblood or Purebred herds, in addition to profitable slaughter progeny.

The SRI estimates the genetic differences between animals in terms of net profitability per cow joined for production of replacement females and slaughter steers to a carcass weight of 435kg at 32 months of age and a 385kg carcass from surplus heifers at 29 months of age. In terms of relative economic importance, the SRI places the following emphasis on these main traits: 41% on marble score (MS); 14% on Residual Feed Intake (RFI) feedlot; 12% on sale liveweight (which will reflect the growth potential and therefore carcass weight of an animal); 9% on meat yield; 6% on dressing percentage and 23.5% placed on other cow and calf traits.

Wagyu Breeder Index (WBI)

The Wagyu Breeder Index estimates the genetic differences between animals in net profitability per cow joined in a commercial Fullblood or Purebred self-replacing herd that has a low-input, grass-based production system. Heifers are retained for breeding and steers and surplus females are sold as feeders for feedlot finishing.

Steers are assumed to be slaughtered at 32 months after 550 days of feedlot finishing targeting 460kg carcasses.

Heifers are retained for breeding and therefore maternal traits are of importance. Marbling is targeted at breed average with optimised growth.

In terms of relative economic importance, the WBI places the following emphasis on these main traits: 37% on marble score (MS); 12% on sale liveweight; 9% on meat yield; 7% on dressing percentage and 13% placed on other cow and calf traits.

Fullblood Terminal Index (FTI)

The Fullblood Terminal Index has an increased weighting on the Marble Score EBV and can be used to select bulls to produce profitable slaughter progeny where none are retained for breeding.

The FTI estimates the genetic differences between animals in terms of net profitability per cow joined based on production of slaughter stock only, with a 435kg carcass from steers at 32 months of age and a 385kg carcass from heifers at 29 months of age. In terms of relative economic importance, the FTI places the following emphasis on these main traits: 64% on MS; 11% on Residual Feed Intake (RFI) feedlot; 9% on sale liveweight; 7% on meat yield; 5% on dressing percentage and 3% placed on other young animal traits and 0% on maternal traits.

F1 Terminal Index (F1I)

The F1 Terminal Index has an increased weighting on the Marble Score EBV and can be used to select bulls to produce profitable F1 slaughter progeny where none are retained for breeding.

The F1 Index estimates the genetic differences between animals in terms of net profitability per cow joined based on production of a 420kg carcass from steers and a 387kg carcass from heifers at 28 months of age. In terms of relative economic importance, the F1 Index places the following emphasis on these main traits: 68% on MS; 9% on Residual Feed Intake (RFI) feedlot; 4% on sale liveweight; 6% on meat yield; 4% on dressing percentage and 9% placed on other young animal traits and 0% on maternal traits.

Percentile bands for 2019 born Wagyu calves

For benchmarking, the average Wagyu BREEDPLAN EBVs for the 2019 born calves are tabled.

IMPORTANT NOTICE

It is very important that you appreciate when viewing the AWA database that the information contained on the AWA database, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, is based on data supplied by members and/or third parties. Whilst every effort is made to ensure the accuracy of the information reported through AWA, AWA officers and employees assume no responsibility for its content, use or interpretation. AWA disclaims all liability (including without limitation, liability in negligence) for all expenses, losses, damages and costs you may incur as a result of the use by you of the data on this AWA database and the information supplied by ABRI and AGBU being inaccurate or incomplete in any way for any reason.

Regarding EBVs and Index values, it is very important to appreciate, and you need to be aware that:

- » EBVs are derived using Wagyu Single-Step BREEDPLAN technology developed independently by the Animal Genetics and Breeding Unit (AGBU), using the information contained within the AWA database.
- » AGBU is a joint venture of NSW Department of Primary Industries and the University of New England, which receives funding for this purpose from Meat and Livestock Australia Limited.
- » AWA relies solely on advice provided by AGBU and ABRI in accepting Wagyu Single-Step BREEDPLAN software.
- » EBVs published in Wagyu Single-Step BREEDPLAN are estimates of genetic potential of individual animals and may not reflect the raw animal phenotype.
- » EBVs can only be directly compared to other EBVs calculated in the same monthly Wagyu Group BREEDPLAN analysis.

Regarding pedigree and DNA testing results submitted to the AWA, it is very important to appreciate, and you need to be aware that:

- » Pedigree and DNA data submitted and supplied to AWA may have errors in it which cannot be detected without further DNA testing.
- » Technology may have advanced since a particular test was undertaken so that previous inaccuracies which were not detectable are now able to be detected by current testing technology.
- » AWA estimates that less than 1% of the pedigree entries, ownership or breeding details in the AWA Herdbook may have errors or which may be misleading. For this reason, users ought to consider if they need to obtain independent testing of the relevant animal (if possible) to ensure that the data is accurate.

Regarding prefectural content, it is very important to appreciate, and you need to be aware that:

- » Prefectural content is based on the estimation of prefectural origin from Japanese breeding records of 201 foundation sires and 168 foundation dams. As genotype-based parent verification is not used in Japan, and full Japanese registration certificates are not available for all foundation animals, exact prefectural composition for these sires and dams cannot be validated.
- » The calculation of prefectural content for Australian Herdbook animals relies on the accuracy of pedigree records and DNA samples provided by AWA members.
- » The reporting of prefectural content for animals within the AWA Herdbook relies on the calculation provided by ABRI.

If you consider that you do not understand or appreciate the nature and extent of the data provided on this website or the EBVs of a particular animal, then AWA strongly recommends that you seek independent expert advice.

Genetic conditions

GENETIC CONDITIONS IN WAGYU CATTLE

All breeds of cattle, have undesirable genetic conditions. Fortunately, advances in molecular genetics have facilitated the development of DNA tests for the conditions which enable them to be managed. Breed societies are at the forefront of developing strategies to manage undesirable genetic conditions and seedstock members are leading the industry with their uptake of this technology.

KNOWN GENETIC CONDITIONS OF WAGYU:

SPHEROCYTOSIS (B3) - Cattle that are homozygous (two copies of the recessive allele) have pernicious anaemia (bleeding caused by the abnormal red blood cells). Death normally occurs within the first seven days after birth. Some cases live to adulthood but there is a severe retardation in growth.

CHEDIAK HIGASHI SYNDROME (CHS) - Cattle that are homozygous (two copies of the recessive allele) have a reduced immune response to disease which reduces their ability to resist bacterial infection. Blood is slow to coagulate so often the first indicator is unusual umbilical cord bleeding at calving. Cattle with this syndrome often have an unusually pale coat colour.

CLAUDIN 16 DEFICIENCY (CL16) - Cattle that are homozygous (two copies of the recessive allele) have terminal kidney failure and the onset can occur any time from late adolescence. Cattle are unlikely to live more than six years.

FACTOR XI DEFICIENCY (F11) - Cattle that are homozygous (two copies of the recessive allele) show prolonged bleeding time after castration or dehorning. It is also possible that Carrier x Carrier matings have increased difficulty producing viable fertilised embryos or full term pregnancies and may be repeat (return to cycle) breeders.

NOTE - This is generally a non-lethal recessive condition with affected animals being able to live as normal. This Australian Wagyu population has a high frequency of F11 carriers, which makes it an important genetic condition to manage.

IARS DISORDER - Also known as perinatal weak calf syndrome, the disorder results in death within the last few weeks of gestation or few days of life. A mutation in the IARS gene (isoleucyl-tRNA synthetase) causes a reduction in activity of the enzyme for protein synthesis for a developing embryo and newborns. Calves affected by this disorder exhibit anaemia, depression, weakness, variable body temperature, difficulty nursing, growth retardation, and increased susceptibility to infection.

Carriers of genetic conditions may be useful in Terminal breeding programs where all the progeny are slaughtered and not used for breeding purposes.

For more information about the inheritance and management of genetic conditions visit

website  wagyu.org.au

CODE EXPLANATION

The first two, three or four characters vary with the genetic condition ie. B3, CHS, CL16, F11, F13 or IARS

__F Indicates that the sample submitted for this animal **has been tested** and found to be **FREE** of the causative mutation responsible for the indicated genetic condition. This animal is homozygous free, meaning that it has two copies of the normal variant (or allele) of the gene.
Shown in **GREEN** in the lot listing within the catalogue.

__C Indicates that the sample submitted for this animal **has been tested** and found to be a **CARRIER** of the causative mutation responsible for the indicated genetic condition. This animal is heterozygous for the mutation, meaning that it has one mutant allele and one normal allele. This animal could pass the mutation to approximately half of its progeny.

___% Indicates that, based on pedigree information supplied by the breeder of the animal, the animal **has a chance to be a carrier** of the mutation responsible for the indicated genetic condition but **HAS NOT BEEN TESTED**. The higher the indicated percentage, the larger the chance the animal may be a carrier

__FU Indicates that, based on pedigree information supplied by the breeder of the animal, the animal is **expected to be free** of the mutation responsible for the indicated genetic condition. However, this animal **HAS NOT BEEN TESTED** for the causative mutation and the AWA gives no guarantee as to the animal's "free" status.

__A Indicates that the sample submitted for this animal **has been tested** and found to be **AFFECTED** by the genetic condition. This animal is homozygous for the mutation responsible for the genetic condition and has two copies of the mutant variant of the gene.

DISCLAIMER

The Single-Step Wagyu BREEDPLAN analysis software is a Wagyu-specific multi-trait genetic analysis platform developed by the Animal Genetics and Breeding Unit using genomic data in addition to Best Linear Unbiased Prediction analysis of pedigree and performance data.

Single-Step Wagyu BREEDPLAN is licensed through the Agricultural Business Research Institute. EBVs are generated on a monthly basis to capture new genomic and performance data as it is contributed by AWA members.

EBV figures may change as a result of contribution of genomic and performance data by AWA members.

Sale day information

BUYING AT THE ELITE WAGYU SALE

The Elite Wagyu Sale – April 2021 is being conducted by the Australian Wagyu Association and its agent Grant Daniel & Long Pty Ltd as a live auction interfaced with the Elite Livestock Auctions online facility commencing at 4pm (AEST) on Wednesday 28 April, 2021.

Online bidding and viewing

The sale will be a live auction with an online interface through Elite Livestock Auctions allowing appropriately registered potential buyers worldwide to bid. Potential online buyers from Australia should register with Elite Livestock Auctions.

Special arrangements must be made by international bidders with GDL who will provide a temporary buyer password for this sale only.

Buyers attending the sale will need to register with the Agents prior to the sale.

Bid online from anywhere in the world

All prospective international purchasers, whether new or past bidders must contact the agents GDL to **pre-register** and **receive trading approval**.

A GDL/Elite Livestock Auctions temporary buyer number will be created, with a username and password, to enable the purchaser to log in anywhere in the world and bid. This account will be terminated upon settlement post sale.

Sale day

WEDNESDAY 28 APRIL 2021

4.00pm
(AEST)

SALE COMMENCES

Females, Bulls, Flush, Embryos
and Semen

PRE-SALE BIDDING ONLINE will commence from 4pm Monday 26 April and will remain open until one hour before the auction commences.

For those bidders that are unable to view the live auction, a confidential "Set and Forget" bid facility will automatically bid on your behalf, if you are outbid, up to your maximum limit.

HOW TO REGISTER WITH ELITE LIVESTOCK AUCTIONS

How to bid online within Australia

STEP 1

- Simply go to **elitelivestockauctions.com.au** using your desktop, laptop, iPad, iPhone or android device.

STEP 2

- Click on the **"Sign Up"** page / link.

STEP 3

- Create a bidding profile using the **bidder registration page**. You can either register as a livestock agent, company or private buyer.

STEP 4

- Agree** to the Elite Livestock Auctions Terms and Conditions and the Selling Agents Sale Terms and Conditions as printed in the official Sale Catalogue.

STEP 5

- Click **"Register"**.

STEP 6

- You will then be **notified by email** that an account has been created.

STEP 7

- Once an account has been created you are all **"Set to Bid"**.

STEP 8

- Each auction can then be viewed by clicking **"Live Auction"** logo on the Elite Livestock Auctions website.

STEP 9

- Once you receive email notification that your account has been created please go to the sale you wish to bid at and click **"Request to Bid"**.

STEP 10

- The sale agents will then approve your application to bid and on the sale catalogue you will see **"check Bid Request Approved"**.

STEP 11

- On Sale day simply login, click **"Enter Auction"** on the catalogue page and you can start bidding. There is no need for software download.

STEP 12

- You will then be **notified by email** that an account has been created.

Sale day information

The sale will be conducted under the ALPA 2017 National Auction Terms and Conditions of Sale (www.gdlrural.com.au).

The following are special conditions applied by the AWA to generate a high level of quality assurance. The AWA is facilitating the Sale to make available high performing Wagyu genetics to the Australian and International beef cattle industries.

SALE REGULATIONS

Vendors must agree to offer lots under the following conditions and regulations:

1. **VENDORS** must be financial AWA full members (fully paid) and all live Lots, joining sires, donor dams and donor sires must be AWA registered prior to submission for entry into the Sale. No vendor may have more than two (2) entries in any single Sale Category or more than five (5) entries in total.
2. **ALL LOTS** to be Wagyu Fullblood 100% but 'special interest' Lots may be accepted. 'Special interest' may include poll, purebred Wagyu or rare genetics (see *clause 7 for more detail*). All Lots must have EBVs in the top 5% in each trait category - carcase, growth and maternal (gestation and milk) and have an AWA Breed \$Index value in the top 1% of Wagyu BREEDPLAN. This includes live Lots, joining sires, donors of semen and embryos for embryo Lots.
3. **GENETIC DIVERSITY** no single sire or dam will represent more than 10% of sale Lots as themselves, their genetic material, or as the sire or dam of progeny sold as Lots in the catalogue.
4. **LIMITED SALE CATEGORIES** the sale categories will consist of: Live female (*including PTIC and calf-at-foot*) and Live Males (12 months or older with valid semen morphology certificate) Flush, Embryo and Semen Lots.
5. **LIMITED LOT NUMBERS WITHIN SALE CATEGORIES** lots within the sale categories will be determined by the Elite Wagyu Sale Committee considering the following guidelines

Female Lots may total twenty (20) and shall comprise of:

- » no more than half being animals ranked on the Wagyu Self-Replacing \$Index in combination with other EBVs
- » no more than half being animals ranked on the Wagyu Breeder \$Index in combination with other EBVs,
- » other animals being ranked on EBVs in combination with \$Indexes or being of rare or Special Interest genetics.

Males Lots may total ten (10) and shall comprise of:

- » no more than half being animals ranked on the Wagyu Self-Replacing \$Index in combination with other EBVs
- » no more than half being animals ranked on the Wagyu Breeder \$Index in combination with other EBVs
- » other animals being ranked on EBVs in combination with \$Indexes or being of rare or Special Interest genetics.

In addition, **Live Lots** must meet the following criteria:

- » minimum body condition score 3 – as assessed by veterinarian or qualified inspector
- » must have a genomics test completed and recorded with the AWA
- » average EBV accuracy of 55% or greater for heifers and young bulls with one (1) progeny or less
- » average EBV accuracy of 65% or greater for sires and cows (more than one (1) calf)

Semen Lots and the **sire** and **dam** of the **embryo** and **flush** Lots must meet the following criteria:

- » must have a genomics test completed and recorded with the AWA
- » average EBV accuracy of 55% or greater for heifers and young bulls with one (1) progeny or less
- » average EBV accuracy of 65% or greater for sires and cows (more than one (1) calf)

Embryo and Flush Lots may total ten (10) and shall comprise of progeny being ranked on EBVs in combination with \$Indexes or being of rare or Special Interest genetics.

Semen Lots shall not exceed ten (10) in total and shall comprise of progeny being ranked on EBVs in combination with \$Indexes or being of rare or Special Interest genetics.

6. **OVER-SUBSCRIBED** the maximum number of Lots will be 50 Lots or as determined by the Elite Wagyu Sale Committee responsible for the acceptance or rejection of Lots.
7. **SPECIAL INTEREST** refers to Lots that do not qualify for sale based on being within the top 1% of AWA \$Indexes or the top 5% BREEDPLAN percentile bands for multiple traits; but are from rare genetics (original imported genetics from Japan or USA: excluding cloned material) or from Polled Purebred genetics within the top 5% BREEDPLAN percentile bands for traits. Finalisation of special interest lots shall be determined at the discretion of the Elite Wagyu Sale Committee.
8. **HEALTH DECLARATIONS** vendors of live Lots are required to provide an Elite Wagyu Sale specific animal health declaration which will be made available to potential buyers on wagyu.org.au.

Bull vendors are required to use an Australian Cattle Veterinarian to provide a BullCheck report to satisfy the mandatory structural soundness/fertility/semen test requirements.

9. **QUARANTINE AND MOVEMENT RESTRICTIONS** the Vendor shall indemnify the Purchaser on demand against loss resulting from infringement of quarantine restrictions or movement restrictions unless such restrictions were disclosed in the Assessment or Catalogue. JBAS status must be disclosed for all live Lots.

10. **THE VENDOR WARRANTIES:** that the content of the Listing (including any Catalogue entry) is true, complete and accurate and that all material information required by any designated form of Assessment, the Sale Entry Conditions or Sale Regulations has been included in the Assessment.

11. **LOCATION AND EXPORT STATUS OF LOTS** vendors of live and genetics Lots are required to provide the location of Lots and the export status of Lots.
12. **PRE-SALE INSPECTIONS** the Lots are located on the vendors' properties and genetics are in storage as disclosed in the catalogue. Pre-sale physical inspections may be arranged directly with the vendor. Photographs will be provided in the sale catalogue and videos will provided online where possible.
13. **LIVE LOTS** to consist of one animal or calf and cow at foot as one Lot.
14. **EMBRYOS** Lots to comprise a minimum of four (4) A grade embryos from the same joining. Bidding is PER EMBRYO.
15. **FLUSHES** while the purchaser owns the complete flush regardless of results, a minimum of four (4) A grade embryos are guaranteed but with no pregnancy guarantees. Bidding is PER FLUSH.
16. **SEMEN** Lots to comprise any number of straws between 2 and 10. Bidding to be PER STRAW.
17. **BREEDPLAN** figures will be published in the online catalogues and mid-parent BREEDPLAN figures for embryos. The catalogue will carry BREEDPLAN figures generated by the most recent run prior to publishing. More up to date data can be found in the online catalogue at wagyu.org.au.

Sale day information

18. BULL AND FEMALE FERTILITY AND SOUNDNESS

GUARANTEES REQUIRED all live Lots to be independently evaluated pre-sale by an AVA BullCheck for structural soundness and fertility with semen motility for bulls and pregnancy tests for females at vendor's expense. The evaluation reports are to be provided to AWA within 14 days of the entry closing date.

BULLS save and except for calves at foot, all bulls are guaranteed breeders and to so prove within six months of the date of sale or by reaching the age of 24 months whichever date shall be later.

FEMALES save and except for female calves at foot, all females are guaranteed to be in calf or go in calf within six months of the date of sale or by the age of 30 months whichever date shall be later. A positive pregnancy test certified by a qualified veterinary surgeon shall be sufficient evidence that the animal is in calf.

19. CLAIMS REGARDING FERTILITY must be made to the vendor within six months from the date of sale and prior to the animal entering a quarantine area other than on the vendor's property. Claims must be accompanied by a veterinary certificate which must clearly identify the basis of the claim. The vendor retains the right to have the animal placed on a property nominated by the vendor or returned to the vendor's property for further assessment of fertility for a period not exceeding six months. In the event of the animal being proven fertile within the period, the costs incurred shall be borne by the purchaser. In the event of the animal not being proven fertile within the period the costs incurred shall be borne by the vendor. Any animal failing to breed as determined by a cattle veterinarian will be replaced with a similar animal. Infertility resulting from injury or disease occurring after the sale of the animal will not be covered by this guarantee.

20. LIABILITY OF THE VENDOR the Vendor will indemnify AWA on demand against all Loss arising out of any act, error, omission, breach, default or negligence of the Vendor, Assessor, or any Agent. Except for costs

defined elsewhere in the conditions of sale, the liability of a vendor in respect to claims relating to fertility shall not exceed the purchase price of the animal(s) or provide mutually agreed upon replacement animals.

21. REFUNDS in the event of a claim being substantiated and the purchase price refunded, the animal(s) shall automatically become the property of the vendor and be returned to the vendor or be disposed of recording to vendor instructions at vendor's expense. This guarantee is voided automatically if the animal is returned to the vendor in:

- » poor physical condition or with any injury as determined at the sole discretion of the vendor acting reasonably;
- » or if tests carried out on behalf of the vendor within 14 days of return proved positive to any diseases which may affect the animal's fertility or ability to breed naturally;
- » or the purchaser admits that it has or the vendor forms the view acting reasonably that the purchaser has collected and stored semen from a bull or has performed super ovulation or flushed a female.

In the event of a dispute as to whether a Lot is a breeder, such dispute shall be resolved by the vendor and the purchaser and the auctioneer. While the auctioneer will use their best endeavours to assist, shall have no liability or responsibility in that regard. In the event that a Lot is alleged or proved to be a breeder the purchaser shall nevertheless be obliged to pay the auctioneer the full price and any other monies or interest payable by the purchaser in accordance with these terms and conditions.

22. BULL & FEMALE BREEDING HISTORY REQUIRED

a record of semen collected, stored or sold, is required for each live bull Lot. Unless semen has been retained, identified and disclosed by the vendor, all rights to semen and sales of semen rest with the Purchaser. A record of live calves born is required for each female along with a record of flush history and embryos stored or sold.

23. FREIGHT all freight/delivery costs to be the responsibility of the purchaser.

24. **GENETIC CONDITIONS** unless able to be proven and declared free by pedigree, all live Lots listed are required to be tested for genetic conditions with results to be published in the catalogue. Strong preference given to animals and donors which are DNA tested free or 'free by pedigree' of B3, CHS, CL16 and F11.
25. **VIDEOS/PHOTOGRAPHS** high quality still photographs and videos must be provided when requested (to be taken at vendor's expense).
26. **ENTRY FEE** (GST inclusive) for each accepted entry \$550 per live animal, flush and embryo lots and \$275 per semen lot to cover Elite Livestock Auctions, advertising, catalogue and/or transfers. Payable on receipt of invoice and non-refundable once the entry is accepted and catalogued.
27. **AGENT'S COMMISSION** 7% total commission + GST (4% agent, 3% AWA).
28. **BUYER'S AGENT REBATE** nil to outside agents
29. **SETTLEMENT** by GDL Dalby, Qld, 12 days from day of sale.
30. **RESERVES** to be provided to the agent on day of sale or any time prior.
31. **SALES TO INTERNATIONAL BUYERS** settlement will only occur after full payment has been received, within 12 days from the day of sale or as soon as is practical after full payment by the buyer.
32. **CATALOGUES** a catalogue will be available prior to the sale online through wagyu.org.au. and on the Elite Livestock Auction's and agent's websites.
33. **ORDER OF SALE** the order of sale will be determined by the Elite Wagyu Sale Committee in liaison with the Agents.
34. **INSURANCE** risk changes to the purchaser at the fall of the hammer. Insurance is recommended and will be available at the sale.
35. **ELITE LIVESTOCK AUCTIONS** the sale will a live online auction through the Elite Livestock Auctions interface, allowing appropriately registered potential buyers worldwide to bid. Potential buyers from Australia should register with Elite Livestock Auctions. Special arrangements must be made by international buyers with GDL who will provide a temporary buyer number for use on Elite Livestock Auctions for the sale only.
36. **TRANSFERS** AWA will transfer the ownership of live Lots to the new owners at no cost.
37. **FREIGHT & DELIVERY AFTER SALE** all live animals and genetic material are at the vendor's property or other location as indicated in the catalogue. Genetic material is usually stored at registered premises. Freight is the purchasers' responsibility to arrange and pay for. The agents will supply to the purchaser the contacts of the vendor and storage premises if applicable. Delivery will not be approved until the purchaser has paid in full.
38. **GST** the auction will be conducted on a GST exclusive basis and GST of 10% will be added to the sale price on the invoice.
39. **RISK & LIABILITY RELEASE** in the event of a live sale:
 - » any person attending the sale does so at his/her own risk.
 - » all persons attending the sale release the vendors and agents from all actions or demands due to any loss, death, damage or injury occurring on the premises.
 - » the vendors or agents are not responsible and have no liability for any death or injury to any person or any loss of or damaged to the person attending the sale, their property or otherwise.
40. **HOW TO BID** registered bidders can bid live by attending the auction or bid online through Elite Livestock Auctions or by telephone via a nominated agent/ third party
41. **BIDDING VARIATIONS (PER LOT or PER ITEM)** Lots and will be offered for sale in the following manner:
 - Live cattle – bidding is per Lot
 - Embryo in-utero – bidding is per Lot
 - Flush – bidding is per Lot
 - Embryos – bidding is per embryo
 - Semen – bidding is per straw

Vendor listing

2021 VENDOR LISTING

ACADEMY WAGYU

SELLING SEMEN LOT 42

HERD ID **AWS**

Academy Wagyu Stud, began in 1998 with the purchase of one Black Wagyu cow and in 2003 I purchased six Kumomoto Red cows and a bull from Kalanga Stud. Performance testing with BREEDPLAN started the first year of having Wagyu as I had been using BREEDPLAN with my Hereford Stud since the early 1980s. Bull production, female and semen sales have been my business for 40 years. Although small, I have concentrated on fertility, growth, milk and marbling. All available tools have been used in my quest for excellence in breeding. The herd is run at Armidale in the New England area of NSW. It is cold and healthy country.

CODENWARRA

SELLING FEMALE LOT 11

HERD ID **MCK**

Codenwarra, located in the heart of Central Queensland is owned by Robin McCosker and has been in the McCosker family since 1928. Robin, along with his late brother John, started their Fullblood herd, Codenwarra Wagyu (MCK), with an embryo transfer program in 2000 under the guidance of Simon Coates. Today, the MCK herd consists of 400 registered Fullblood females. Over the past 20 years, Robin has endeavoured to develop the herd's performance through seeking improved genetics supplied by Sumo Cattle Company. In addition to natural breeding, new genetics were introduced to the herd when 100 breeders underwent an AI program earlier this year.

LISHEEN WAGYU

SELLING SEMEN LOT 43

HERD ID **LSH**

Lisheen Wagyu, based Victoria, Australia. The Fullblood herd commenced in 2014 out of a larger F1/F2 breeding program which started in 1997. The aim was to breed a small herd of high quality Fullblood Wagyu cattle using a variety of bloodlines and genetic selection tools. All cattle are raised under paddock conditions and all BREEDPLAN data is collected under those conditions with no grain feeding ensuring confidence that cattle sold will perform under similar conditions. The emphasis is on breeding cattle, particularly bulls, with good temperament, growth, fertility, maternal and carcase traits - truly multi-purpose animals. All cattle are subjected to extensive genetic testing and health programs with comprehensive records maintained. A strict biosecurity plan is in place with a JBAS Score of 6.

NOTES

BDWFQ0352 was bred utilising the best Macquarie Wagyu genetics - BDWFY0408 and CCOFG0113. She is phenotypically outstanding, weighing 368 kg at 18 months and has a very quiet temperament. Her sire is a Y408 son BDWFM0546 whose straws sold for over \$6700 each at the 2019 Elite Wagyu Sale. Her dam BDWFM0411 is sired by G113, one of the most well performed sires in recent times. Over 60% of his 160 carcasses have marbled 9 or 9+ at an average HCWT of 497 kg! G113 daughters are carrying on his exceptional legacy - their progeny carcasses have averaged 460 kg and MS 9. Her excellent BREEDPLAN EBVs tell the story - top 1% for all BreedObject \$Indexes, MS and GL, top 5% for MF, and top 10% for EMA and CWT. The perfect female to build a herd from!

NOTES

Sumo Hikohime R56 is an impeccably balanced daughter of super sire Coates Itoshigenami G113, with impressive MS, CWT and Marble Fineness EBVs and an overall top 1% SRI, FTI and F1 BreedObject \$Index ranking. The sire G113 is in a league of his own, with over 90% accuracy for MS EBV and one of the highest ranking MS EBV (top 1%) and SRI (top 1%) bulls in Australia. G113 is a proven performer recording an average MS of 8.5 and average CWT of 513kg over 50 analysed carcasses. R56's pedigree contains an unrivalled double set of superior genetics from all round foundation sire Terutani 40/1 and superior matriarch dams: Dai 2 Kintou 3 and Hikohime 3/2. Dai 2 Kintou's foundation dam Ezokinto 1A, was awarded grand prize at the third Zenkyo competition. The strong presence of these foundation animals has produced precision balance across MS and CWT and a high predictability of producing the next herd superstar.

NOTES

Sumo Hikohime R126 ranks in the top 5% on all four Wagyu BreedObject \$Indexes. With impressive top 5% MS, CWT and Marble Fineness EBVs, R126 is sired by Sumo Michifuku F154, who has proven himself as an industry leader producing average MS of 8.6 and CWT of 462kg over 21 analysed progenies. R126 is a descendent of the super matriarch foundation dam Hikohime 3/2 who has produced outstanding progeny with superior balance in Growth and CWT capabilities. R126's dam, F212 has high carcass capability, as both her sire: Sumo Itoshigenami C125 and the sire of the granddam C223: Sumo Itoshigenami X65, have produced excellent carcass outcomes. The precision line breeding in the maternal pedigree of foundation sire TF 148 Itoshigenami has produced a high predictability for exceptional carcass outcomes, with this bull considered by many to be one of the most influential marbling foundation sires in Australia.

NOTES

Cochin Wagyu are pleased to offer this exceptional top 1% heifer for the astute buyer. This heifer is sired by the #2 SRI bull Sumo Michifuku L195. Sumo L195 boasts a top 1% SRI as well as massive growth and carcass traits whilst still maintaining high Marble Score and Fineness. Q099 Female lines include WKS Okahana, Hatsuhi and Chisahime. Q099's maternal grand-dam is a full sister to Westholme Namiyoshi 4 who is famous for being the sire of Westholme Hiramichi Tsuru. Q099 was AI'd on 18 March 2021 to 'Arubial Anticipated' who is an exciting combination of proven sires 'Coates Itoshigenami G113' from a 'Mayura Itoshigenami Jnr' daughter. The resulting progeny of this joining would be a dynamite cross of genomic giants of the breed. Q099 was flushed before AI and vendor will retain the 1 embryo retrieved.

NOTES

This young female has a superb pedigree with two of the most influential sires of the last 10 years in her immediate background (SMOFF0154 and BDWFY0408). So it is of no surprise that she comes with such impressive EBVs, sitting comfortably in the top 1% of the breed. Specifically she has a top 1% CWT and a very strong MS sitting her in the top 1% for WBI and SRI.

Those familiar with the breed know how difficult it is to breed animals who are so strong in both traits. We believe this female would be an asset to any herd, who are looking for strong maternal traits without compromising marbling.

NOTES

OPTION TO PURCHASE KGLFR0082 OR KGLFR0104 - other will be retained for future herd improvement.

Out of the 1651 females sired by Itozurudoi TF151, Akiko rates as the best for Wagyu Breeder Index. The genetic structure of these females gives the purchaser many options depending on the direction the purchaser wishes to pursue. Both females are tested free of genetic conditions and are in the top of BREEDPLAN figures compared with other females sired by TF151.

Both are attractive visually and will grow into beautiful cows.

NOTES

R13 is by Sumo's top sire SMOFF0154 and out of Olive Grove's highly fertile female HPCFG0208.

R13's dam is a large framed cow that averaged 15 A-grade embryos over 10 flushes, she also recently graded 6 carcasses averaging 8.1 MS and 420kg.

The combination of genetics in this heifer indicates she would flush well, and would pass on strong milk, carcass and marble traits into her offspring. R13 is Top 5% for WBI, SRI and FTI and F1TI. She is tested free of all genetic disorders.

NOTES

The sire of this heifer, Sumo Cattle Co Michifuku M65, has good growth traits with CWT in the top 10% plus high marbling potential (top 15%). Its WBI and SRI is in the top 5% of Australia's herd.

With an average daily gain of 0.9 kg/day, this heifer has inherited excellent growth traits including MCWT and CWT in the top 1%. She also has above average carcass traits including MS and MF (top 20%). She brings it together with a WBI in the top 1% of the breed (best in her cohort).

At 16 months of age, this heifer weighed 441 kg (weighed in January 2021).

NOTES

R18 is Olive Grove Wagyu's highest ranked bull for the 2020 breeding year. Of all 2020 bulls registered on BREEDPLAN he is ranked in the top 10 for SRI.

Likewise, his sire SMOFLO0195, is also placed in the top 10 of all bulls for SRI on BREEDPLAN. Combine this with R18's dam, SMOFLO0062, who is by SMOFF0154 and out of a dam by Shikikan on the top side and a TF 151 daughter on the bottom side, you have a bull well and truly bred to produce the best.

R18 is ranked in the top 1% for all BreedObject \$indexes and is free of all genetic disorders.

NOTES Sumo Michifuku P651 boasts impressive top 1% MS and MF EBVs and an overall top 1% SRI and F1TI. Sired by Sumo Michifuku F154 who with over 80% accuracy in MS EBV has produced profitable carcass results averaging MS of 8.6 and CWT of 462kg over 21 analysed carcasses. P651's maternal pedigree contains a unique combination of strong maternal genetics including Hikohime 3/2 and a double set of the original foundation cow: TF Dai 2 Kinntou 3, whose foundation dam Ezokinto 1A, was awarded grand prize at the third Zenkyo competition. The precision line breeding of high marbling sire World K's Michifuku combined with proven carcass performers Itoshigenami TF148 and Sumo Michifuku F154 has produced P651's outstanding MS EBV. This sire presents an exciting opportunity for Wagyu breeders looking to capitalize on high marbling traits.

NOTES

Of the 644 sons of Itozurudoi TF151 on BREEDPLAN, Takahiro is the highest rated bull in two BreedObject \$Indexes, WBI and SRI. Takahiro is the second highest rated bull for FTI. He is free of all genetic conditions. This young bull, besides being by TF151, has the other great advantage that he will grow into a very big bull. As a future sire, not only does BREEDPLAN rate highly, but he has the advantage that he contains no Itoshigenami in extended pedigree and very minimal Michifuku who is well back in his pedigree.

He has the other advantage for a rare son of TF151, that he is free from all genetic disorders and is a very phenotypical looking bull.

NOTES

R7 is a well ranked, evenly balanced young bull, being top 1% for WBI and SRI and top 5% for FTI. He is by industry leading sire, SMOFF0154, who has graded 21 carcasses averaging 8.6 MS and 468kg.

His dam is HPCFG0208, that recently graded 6 carcasses averaging 8.1 MS and 420kg. She is a large framed, highly fertile cow that averaged 15 A-grade embryos per flush over 10 flushes.

If you require growth, fertility and marble, this bull has the genetics and is tested free of all genetic disorders.

NOTES

INTEREST LOT, SELLING AS 50% EMBRYO INTEREST

This may well be the high performance and maternal, outcross female that the breed has been waiting for. Q914 is a direct daughter of the up and coming 40/1 son bred at Sumo, N607, and from maybe the most outstanding F126 daughter in production, Fuku N624. N624 is one of the most phenotypically pleasing Wagyu females anywhere possessing an outstanding udder, both in typ and amount of milk produced. Coupled with N607, which only solidifies the performance and maternal attributes of Q914; you have an absolutely outstanding female. Q914 ranks in the top 1% for 400 and 600-day weights and CWT, and well inside the top 5% of the breed for Milk, SS, WBI, SRI, and FTI. The mating options are endless with this female, and this is a unique opportunity to share in the lifetime embryo production from this great heifer. Sells unjoined and ready to flush.

MIN. OF 4 EMBRYOS GUARANTEED BIDDING PER FLUSH

Selling a flush to the bull of the buyer's choice, with the winning bidder of Lot A having the option to take Lot B also. This is one of the most exciting opportunities to ever present in the Elite Wagyu Sale. P654 is one of the most highly credentialed females in the Wagyu breed globally, ranking 4th among all females for MF and 7th for both FTI and F1TI, as well as 13th for SRI across all active females. P654 ranks even higher if this sort takes into account females of breeding age. If you do an EBV sort with the following criteria: Above +43 for CWT, Above +5.2 for EMA, Above +2.5 for MS, Above +0.57 for MF. P654 is the only female in the entire breed that hits all of these criteria! This is an opportunity to catapult your program right to the top of the breed. P654 is open and scheduled to start a flush program for the winning bidder of Lot 20a around mid May and lot 20b 6 weeks later.

NOTES

The sire of these embryos, WPPFP00011, was sired by Sumo Michifuku F154 who is regarded as one of the very best sires in the western world. P00011's dam was sired by TF148 and the grandsire was the well respected Kitateruyasudoi J 2810. The dam of these embryos WGWFD8218 was sired by the renowned TF151 Itozurudoi whose genetics have become extremely difficult to source. TF151 brings with him excellent maternal traits, milk production, high marbling, early growth and top quality carcasses. TF151 weighed 1100 kg and cow D8218 weighs 546 kg. All 4 BreedObject \$Indexes in respect to the embryos are in the top 1%, CWT in the top 5% and MS and MF in the top 10%. This is an excellent opportunity to acquire a top composite package of Sumo F154 and the rare, highly sought after TF151 Itozurudoi genetics.

2 SEMEN STRAWS BIDDING PER STRAW

Proven performance, power and predictability. First time straws have been offered at auction since 2018. Macquarie Wagyu's G113 has been one of most dominant carcass sires in recent times. More than 60% of carcasses sired by him have marbled 9 or 9+ with an average weight of 497 kg! G113 daughters have inherited his outstanding performance traits - their progeny carcasses average MS 9 and weighing 460 kg. No Wagyu sire outside of Japan can match his Australian BREEDPLAN EBVs of top 1% for MS and CWT- the money making traits. He is top 1% for all BreedObject \$Indexes and positive for nearly all other EBVs with the added bonus of being free from all known genetic disorders. Invest in your Wagyu future with the ultimate all round sire.

NOTES

2 SEMEN STRAWS BIDDING PER STRAW

Don't miss this rare genetic opportunity. Macquarie Wagyu Y408 has bred some of the most influential sires and dams throughout Australia. His straws have not been offered for sale since 2017. Y408 progeny carcasses (male and female) have consistently performed above the Macquarie Wagyu program average. Importantly Y408 sons and daughters have inherited his impressive performance traits. Bulls sired by him have produced carcasses averaging 8.2 MS while his daughters progeny carcass results dating back to 2012 have graded at the same impressive level as Y408 himself. This is a rare chance to secure proven Macquarie Wagyu foundation genetics from a great allrounder.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

Mayura L10 is the \$105,000 record priced Fullblood bull. He was the first son of Mayura Itoshigenami Jnr released in 2017. L10's mature weight is 998kgs (2200lb). L10's dam ADBFH0159 had 3 carcasses processed with a average MS 9.33, EMA (REA) 105.66cm (16.37 inches) and CWT (HCW) 494kg (1089lb).

The data from both his sire and dam has lead to his genomic EBVs that lift not only the carcass traits but maternal also. We are extremely happy with his progeny.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

WPPFP00011 currently weighs 652kg and just turned 3 years old. If you run an EBV enquiry with SRI of +\$340 and MS of +2.4 he is 1 of only 4 bulls in Australia.

He also produces amazing calves. He is a quiet, good natured bull and very easy to work with. This is a bull to keep your eyes on for the future.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

PWYPP1917 is a homozygous Polled bull and has a MS and EMA in the top 5%. On the traits his growth isn't very impressive but we have seen this bull grow incredibly well here at Gateway. He is 2.5 years old and at 500kg after he has been covering cows for the past two months. GTF has used this bull over some of the best females in Australia and we are very excited for the offspring to come this year.

This will be the first time Gateway farms releases semen of Phantom and could be the only semen that will be released this year. This is a very rare opportunity to acquire semen of this bull.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

Bar R 52Y. Poll Wagyu is putting our most proven bull (one of the most proven bulls in the world) up for auction for the first time. 52Y is an extremely balanced bull who brings a multitude of high quality traits into the next generation. With over 1800 carcass progeny across a range of growth and marbling females, we really understand what he brings to the table. He is consistently producing high profitability carcasses, with high HSCW, very large REA, and solid marbling. He is averaging approximately 8.3 MS, HSCW 460kg, and 100cm² REA on steers.

The added benefit of the poll gene, phenomenal temperament, and maternal traits, makes him a balanced bull across the board. A rare opportunity to acquire semen from the foundation poll sire.

4 SEMEN STRAWS BIDDING PER STRAW

An outstanding, balanced sire with top 1% BreedObject \$Indexes. His sire is SMOFF0154 a proven champion while his dam side includes Itoshigenami 148. His combination of marbling and growth is extremely difficult to match. Being tested as free from all genetic defects is an important factor in his international success.

These straws have been sold extensively overseas and used in the QGI herds for a series of progeny tests. This is a unique opportunity to pick up a smaller quantity of super high-value straws.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

The EBVs for Q038 indicate a truly elite bull. Q038 ranks in the top 5 of all bulls registered on BREEDPLAN for SRI.

He is by the super sire, SMOFF0154, and his dam is a Westholme cow, AACFK5241, who is by prolific sire Hiramichi Tsuru, and still considered one of the best sires in the Westholme stud line. Q038, with his strong balance of figures, would be a powerful addition to the genetics of any herd.

He is top 1% for all BreedObject \$Indexes and free of all genetic disorders.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

The EBVs for Tumbledown P6135 make him a very impressive animal. P6135 sits comfortably in the top 1% for two of the BreedObject \$indexes. His combination of large CWT with high MS is rare.

His sire is the renowned Sumo Michifuku F154, one of the best performing bulls in the world. On his maternal side he has the strong marbling influences of Kitateruyasudo and Itoshigenami.

His genetics would be a powerful addition to any herd. He is free of all genetic disorders.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

We bought Sanjinami Doi's dam at the 2018 Elite Wagyu Sale or at that time a record \$80,000 from Mayura Station, she was the first Itoshigenami Jnr daughter, ADBFL0082.

L0082 is one of the best large phenotype cows in our herd, with great size and Milk (top 5%).

Sanjinami Doi like his mother is free of all genetic disorders and has balanced genomic EBVs

10 SEMEN STRAWS BIDDING PER STRAW

Marathon Michifuku P0011 (ET) - This bull's sire, Sumo Cattle Co Michifuku F154 is characterized by outstanding Estimated Breeding Values (EBVs) for both MS and CWT (both top 5%).

The dam of this bull is Codenwarra FX0097 (AI) (ET) and has 23 progeny on the ground all showing well above average carcass traits. This joining has proven exceptional outranking both parents in all BreedObject \$Indexes.

This bull has lead his cohort from birth and at 26 months of age and weighed 815 kg after successfully joining 88 heifers all pregnancy tested positive.

NOTES

10 SEMEN STRAWS BIDDING PER STRAW

This is an extremely rare opportunity to acquire semen from a son of World K's Rikitani. Kanadagene 101 is the only Haruki 2 son of Rikitani. He is a very balanced cross of growth and maternal traits from Haruki 2, and extreme marbling from Rikitani. Rikitani was a Fullblood heifer imported into America by World K. She is 100% Tajima, a small cow packed with marbling. There is not a lot of Rikitani in the Australian Wagyu herd. We believe the combination of these two foundation animals is a winner. The growth is already showing up; on a recent trail of 15 bulls at Robbins Island, DM101 had the 3rd highest adjusted weaning weight, of 193kg. Recently, there have been multiple sons of Haruki 2 that are proving up to be high end performing sires. We believe Kanadagene 101 has the potential to be another one.

SALE NOTES

BISHOP WAGYU™

www.bishopwagyu.com

Perfecting the production of quality Wagyu

Breeding objectives are crucial in any commercial herd, tailoring important genetic traits for sustainable production that meets specific market requirements.

We uphold strict criteria for our breeding objectives Above herd average (EBV) for milk, 200, 400, 600 day and CW. High fertility (short gestation length). Consistently high quality marbling (inc fineness) based on raw carcase data and EBVs. Free from all known genetic recessive diseases. Genetic diversity (low inbreeding coefficients).

Please direct your enquiries to

PETE BISHOP
