

Wise Repro, in partnership with the **AWA**, is pleased to offer the following services to AWA-PTP contributor herds at no cost

Before starting an **AWA-PTP Fixed Time Artificial Insemination (FTAI) Program**, a **Wise Repro Reproduction Technician** will attend the contributor herd's property to:

REPRODUCTIVE SOUNDNESS EXAMINATION OF ALL FEMALES

Each female will be assessed to ensure she is suitable for inclusion in the program. The examination covers two main areas:

- **Uterine Pathology** – Ensuring females are not pregnant, do not have a mummified foetus from a previous pregnancy, free of uterine infections, post-calving damage to the uterus, aplasia or segmental aplasia of the uterine tract.
- **Ovarian Activity** – Identifying pre-pubertal heifers, those who are in anoestrous, often seen when the post-calving interval is too short or if in poor nutrition, or those with cystic ovaries.

HERD HEALTH ASSESSMENT

A full herd health review will also be undertaken, including:

- **Discussion of results** from prior FTAI programs and pregnancy results in general.
- **Collecting data** on the age, weight and nutrition of the herd.
- **Vaccination history**, specifically ensuring 7in1 vaccinations are current. Further, based on current health status and risk, consideration of vaccinations for BVDV, Vibrio and IBR.

- **Discuss best management practices** in relation to programming with your team, identify areas of concern and provide solutions.

TAILORED FTAI SYNCHRONISATION PROGRAM

Our team will provide a synchronisation program specific to your herd's requirements.

- **Herd EU Status** – If EU accredited, Oestradiols are banned.
- The use of **Novormon (eCG)** depends on the female's body condition score and lactation status.
- **Deliver all synchronisation supplies** to the property to ensure products are delivered timely and, where applicable, ensure adequate cold chain.
- **Discuss the products used, their functions and how to administer them correctly.** Most importantly, they will be available to answer any questions or concerns you may have about the upcoming program.

Wise Repro, the home of bovine reproduction solutions

EFFICIENT - SCALABLE - PROVEN

We are proud to be a **Diamond Corporate Partner** of the **AWA**. Furthermore as the **AWA-PTP Veterinarian Partner**, we look forward to working alongside Natalie Poole, AWA's Genetic Improvement Projects Manager, the wider AWA team, and, importantly, the contributor herds that make the Progeny Test Program possible.

Wise Repro brings together the specialised expertise of **Ced Wise AB Services**, **Rocky Repro** and **Wise Breeding Services** in a truly integrated alliance. This collaboration uniquely positions us as a genuine end-to-end provider of reproductive solutions, delivering tailored solutions for cattle producers across every stage of the breeding process.

Dr Ced Wise and his team have a passion for bovine reproduction. They are constantly working to improve artificial reproductive outcomes for producers, in turn helping to drive productivity in the industry we all share and love.
